NEMAWASHI: Attaining Value Stream alignment within Complex Organizational Networks. Procedia CIRP, 37, 134--139. <https://doi.org/10.1016/j.procir.2015.08.021>

## Visualization Organizational Dynamics

.Nemawashi : to prepare the ground.

With this method we describe organizational dynamics.  
We do so by transforming the information contained in the KPIs from the management system.

Hypothesis: we have a number of KPIs as a function of time.  
 $KPI_i = KPI_i(t) \quad i=1, \dots, n$

for instance: Cost/Lead Time/RoI/Cash Flow/...

Remember that each KPI describes only one part of the variability in the system.

. With each KPI we describe only some portion of the variability.

$$\text{Variability: } \text{VAR}(\text{KPI}=x) = \frac{\sum (x_i - \bar{x})^2}{n}$$

Example. Nemawashi. A KPI System of a factory is 3 Dimensional and has following data:

	Quality [Q] ppm	Delivery Rate [DR] %	Cost [C] €/Unit
CW1	3300	91	17
CW2	2700	93	18
CW3	1800	89	16
CW4	1500	92	15
CW5	1300	95	16

1. Step. NORMALIZE TO COMPARE.

Each KPI is brought in the range btw [0,1]

$$x_i^* = \frac{x_i - x_{\min}}{x_{\max} - x_{\min}}$$

	Quality [Q] ppm	Delivery Rate [DR] %	Cost [C] €/Unit
CW1	3300	91	17
CW2	2700	93	18
CW3	1800	89	16
CW4	1500	92	15
CW5	1300	95	16

	$Q^*$	$DR^*$	$C^*$
CW1	$\frac{3300 - 1300}{3300 - 1300} = 1$	$\frac{91 - 89}{95 - 89} = 0.33$	$\frac{17 - 15}{18 - 15} = 0.66$
CW2	$\frac{2700 - 1300}{3300 - 1300} = 0.7$	$\frac{93 - 89}{95 - 89} = 0.66$	$\frac{18 - 15}{18 - 15} = 1$
CW3	$\frac{1800 - 1300}{3300 - 1300} = 0.25$	$\frac{89 - 89}{95 - 89} = 0$	$\frac{16 - 15}{18 - 15} = 0.33$
CW4	$\frac{1500 - 1300}{3300 - 1300} = 0.1$	$\frac{92 - 89}{95 - 89} = 0.5$	$\frac{15 - 15}{18 - 15} = 0$
CW5	$\frac{1300 - 1300}{3300 - 1300} = 0$	$\frac{95 - 89}{95 - 89} = 1$	$\frac{16 - 15}{18 - 15} = 0.33$

Step 2. Graphically represent the organizational dynamics.

We could already do it: but in 3D.

Geometric Characteristics  
of the Simplex  
· Is a 2D representation  
of 3 Axis.  
· All coordinates of all  
points add up to one.

	$Q^*$	$DR^*$	$C^*$
CW1	$\frac{3300-1300}{3300-1300} = 1$	$\frac{91-89}{95-89} = 0.33$	$\frac{17-15}{18-15} = 0.66$
CW2	$\frac{2700-1300}{3300-1300} = 0.7$	$\frac{93-89}{95-89} = 0.66$	$\frac{18-15}{18-15} = 1$
CW3	$\frac{1800-1300}{3300-1300} = 0.25$	$\frac{89-89}{95-89} = 0$	$\frac{16-15}{18-15} = 0.33$
CW4	$\frac{1500-1300}{3300-1300} = 0.1$	$\frac{92-89}{95-89} = 0.5$	$\frac{15-15}{18-15} = 0$
CW5	$\frac{1300-1300}{3300-1300} = 0$	$\frac{95-89}{95-89} = 1$	$\frac{16-15}{18-15} = 0.33$

	$Q^{**}$	$DR^{**}$	$C^{**}$
CW1	$\frac{1}{1+0.33+0.66} = 0.5$	$\frac{0.33}{1+0.33+0.66} = 0.165$	$\frac{0.66}{1+0.33+0.66} = 0.33$
CW2	$\frac{0.7}{0.7+0.66+1} = 0.277$	$\frac{0.66}{0.7+0.66+1} = 0.28$	$\frac{1}{0.7+0.66+1} = 0.42$
CW3	$\frac{0.25}{0.25+0+1.33} = 0.43$	0	$\frac{0.33}{0.25+0+0.33} = 0.57$
CW4	$\frac{0.1}{0.1+0.5+0} = 0.167$	$\frac{0.5}{0.1+0.5+0} = 0.833$	0

८

$$\frac{1}{0 + 1 + 0.33} = 0.75$$

$$\begin{array}{r} 0'33 \\ \hline 0+1+0'33 \end{array} = 6'25$$

$$\begin{aligned} \text{CW1} \quad & \frac{1}{1+0.33+0.66} = 0.5 & \frac{0.33}{1+0.33+0.66} = 0.15 & \frac{0.66}{1+0.33+0.66} = 0.33 \\ \text{CW2} \quad & \frac{0.7}{0.7+0.66+1} = 0.27 & \frac{0.66}{0.7+0.66+1} = 0.28 & \frac{1}{0.7+0.66+1} = 0.42 \\ \text{CW3} \quad & \frac{0.25}{0.25+0.133} = 0.43 & 0 & \frac{0.33}{0.25+0.133} = 0.57 \\ \text{CW4} \quad & \frac{0.1}{0.1+0.5+0} = 0.16 & \frac{0.5}{0.1+0.5+0} = 0.833 & 0 \\ \text{CW5} \quad & 0 & \frac{1}{0.1+0.33} = 0.75 & \frac{0.33}{0.1+0.33} = 0.25 \end{aligned}$$

4. Step. Management interpretation.

This system is in Alignment on a time point  $t_j$  if the distance between  $|t_{j-2} - t_{j-1}|$  is bigger than the distance between  $|t_{j-1} - t_j|$ .

$|CW_1 - CW_2| < |CW_2 - CW_3| \rightarrow$  distance is increasing  
so we do not have  
Alignment in  $CW_3$ .

$|CW_2 - CW_3| < |CW_3 - CW_4| \rightarrow$  Distance is increasing  
So we do not have  
Alignment in CW4.

$|CW_3 - CW_4| > |CW_4 - CW_5| \rightarrow$  Distance is decreasing  
So we do have  
Alignment in CW5.
